Dear Valued Customer:

Welcome to the Harris County Municipal Utility District 183. The following information is provided to assist you in becoming familiar with the District's policies as they relate to your water and sewer service. The Board of Directors for Harris County Municipal Utility District 183 has selected Si Environmental, LLC to be the operator of your District's water system.

Si Environmental, LLC takes great pride in our vision and experience to ensure all of your water utility service needs are met with enthusiasm and pride. Our goal is to ensure we provide the highest level of satisfaction in the industry. We invite you to visit our website after the first Billing Cycle where you will be able to create an online account, view your billing history, payment history and pay your bill using your credit card (Visa, MasterCard, Amex or Discover) or electronic check. We provide an online experience that is absolutely secure and convenient. If you wish to be set up on automatic bank draft, please complete the attached form and mail it to:

Si Environmental, LLC
6420 Reading Road
Rosenberg, TX 77471

The District's operator is Si Environmental, LLC. Emergencies are responded to 24 hours a day. Billing questions and non-emergency calls are taken Monday through Friday 8am to 5pm. Please do not hesitate to call with any questions, concerns, or service problems. We are here to help.

Customer Care - 832-490-1600 24/7 Emergency Repair: 832-490-1601

Applicant's failure to adhere to all requirements contained in the District's Rate Order may result in fines, penalties and a delay or denial of service establishment. A copy of the District's Rate Order is available upon request.

Date: _____ Signature: _____

Printed Name: _____

DRINKING WATER DISINFECTION METHOD

This disinfection process involves using chloramines rather than only chlorine as the disinfectant in the water supply.

The use of chloramines rather than chlorines is not new technology as it is in widespread use in many cities and other drinking water supplies. Treating with chloramines is intended to benefit our customers by reducing the levels of disinfection byproducts (DBPs) in the system, while providing protection from waterborne disease. The City of Houston has been treating its water with chloramines for over twenty years. Water containing chloramines is perfectly safe for drinking, bathing, cooking, and most other uses we have for water. **HOWEVER, there are two categories of people who need to take special care with chloraminated water:**

Kidney Dialysis Patients – The change to chloramines can cause problems to persons dependent on dialysis machines. A condition known as hemolytic anemia can occur if the disinfectant is not completely removed from the water that is used for the dialysate. Consequently, the pretreatment scheme used for the dialysis units must include some means, such as a charcoal filter, for removing the chloramines prior to the conversion to chloramines. Medical facilities should also determine if additional precautions are required for other medical equipment.

Live Fish or Other Aquatic Animal Owners – Chloraminated water may be toxic to fish. If you have a fish tank, please make sure that the chemicals or filters that you are using are designed for use in water that has been treated with chloramines. You may also need to change the type of filter that you use for the fish tank.

What is chloramination?

Chloramination is the use of both ammonia and chlorine to disinfect water. Ammonia is added to water at a carefully controlled level. The chlorine and ammonia react chemically to produce a combined chlorine residual or chloramines. Chloramines are safe in drinking water and serve as an effective method of disinfection. In the U.S., many water systems have used chloramination for several decades.

NOTIFICACION DE CAMBIO DE CLORINA A CLORAMINA

El distrito de utilidad municipal (MUD) ha cambiado el desinfectante de cloro que usamos a otro de cloramina. El propósito de este cambio es beneficiar a nuestros clientes reduciendo los niveles de los productos secundarios relacionados a la desinfección (DBPs) en el sistema, proporcionando al mismo tiempo la protección contra las enfermedades originadas por los gérmenes del agua.

No obstante, el cambio a cloramina puede causar problemas a las personas cuya vida depende de las máquinas de diálisis. Si el desinfectante no es completamente eliminado del agua que se usa para la diálisis, puede concluir a una anemia hemolítica. Por lo tanto, el esquema de tratamiento previo usado por las unidades de diálisis debe incluir algunos medios, tales como filtros de carbón, para eliminar la cloramina antes de esta fecha. Las instituciones médicas deben determinar si otros equipos médicos también pueden requerir precauciones adicionales. Además, el agua con cloramina podría ser tóxica para los peces. Si tiene un tanque para peces, asegúrese de que los filtros o los productos químicos que están siendo usados están diseñados para ser usados en agua que ha sido tratado con cloramina. También puede ser necesario cambiar el tipo de filtro que usa para el tanque.

How to Read Your Bill

#1 – Amount Due Before the Account Is Late

#2 – Date the Payment Must Be Received Before Account Is Past Due

#3 – Penalty and Amount That Must Be Paid After the Due Date

DOE, JOHN & JANE		13 MESSAGES Water Conservation Tips 1. Learn how to use your water meter to check leaks. 2. Turn off water while washing your hair and save up to 150 gallons a month. 3. Teach children how to turn off faucets tightly after each use. 4. Know where your master shut-off valve is located. Were a pipe to burst, this could save gallons.
